

Apprenticeship Opportunities

We're looking for our next generation of Apprentices. Whether you're at the beginning of your career journey or looking to take a new direction from the path you're currently on, our Apprenticeship opportunities are open to all and offer a chance to earn money while you gain an accredited qualification.

Role Purpose:

We have opportunities for you to join us as an Apprentice in our Renewables business. This role offers you the chance to become a qualified tradesperson in your chosen field. The programme can take 3 to 4 years to complete and is centred on work based learning and training linked directly to the job.

By the end of the programme you'll have gained valuable on-the job experience, new skills and an industry recognised accreditation, that will offer you the opportunity to build a rewarding and successful career in the energy sector.

Our apprentices attend college on a block release arrangement for several weeks at any one time. You will be supported by a dedicated mentor, your colleagues who you'll work with during your on the job training and also by the support you will receive from your college tutors.

Person Specification

We're looking to recruit the best future talent for our sector - and we know that it's not all about qualifications. We're more interested in your innate strengths and the qualities you can bring to the business.

Our apprentices need to be far more than technical experts in their field, they need to be able to demonstrate an ability to use their initiative, be resilient to the continual changes within our sector and always focused on delivering great results.

You'll be able to pick up new skills quickly, working with others to achieve common goals and adjusting your behaviour to reflect the diversity of our workforce and customer base.

It goes without saying, you'll have a focus on safety and will adhere to our company policies and procedures.
